

Rhinoplasty

Is rhinoplasty life-changing?

"Expertly performed rhinoplasty can create a beautiful nose that is in harmony with the face. This in turn can increase both your confidence and general self-esteem. And the procedure isn't just about improving appearances — rhinoplasty can also improve nasal function and breathing."

What can potential patients expect?

"I listen to my patients so I understand their concerns and then tailor a comprehensive treatment plan to meet their individual needs. I take the time to explain the procedure and answer any questions. After taking "before" photos, I use computer imaging to help communicate how their new nose will look — this provides added reassurance and confidence. My nursing team and support staff are also there for you every step of the way."

Dr. George Marcell
MBBS, FRACS
Facial Plastic Surgeon,
Ear, Nose & Throat Surgeon

Breast Augmentation

What factors need to be considered when it comes to breast surgery?

"As a leader in breast augmentation I believe experience is paramount in achieving the best possible patient outcome. I consider factors like a woman's body build and height; her current breast size, shape and symmetry; breast droopiness; chest wall shape and dimensions; and the patient's desired final breast shape and cup size.

Each factor needs to be assessed and tailored according to the individual, which is why I have an excellent success rate and many happy clients. Choosing to undergo breast augmentation surgery is a major decision, so research and be comfortable with your plastic surgeon before making a commitment."

Is there a secret to achieving natural-looking breasts?

"My philosophy is to deliver the most natural results. I achieve this by tailor making the breast augmentation to each individual patient. Understanding and appreciating breast anatomy and shape along with precise surgical techniques is essential in creating beautiful results."
